HOW TO READ THE CENSUS

Example:

The census is relatively easy to read if you understand the arrangement of the columns which tell where a person was born and what the ethnic language was. The following should help.

1. Standard abbreviations are used for states, and there is no language indication with states.
2. Foreign born indications include: a) where born, and b) person's language. A person who was born in Austria and spoke Croatian would be ACr. A for Austria; Cr for Croatian.
